

COMAU ENVIRONMENTAL PROTECTION AND CONSERVATION POLICY

COMAU intends to establish and maintain an Environmental Management System on its premises.

The aforementioned System aims for the best possible respect of the Environment, and this system is achieved through defining and reaching environmental goals. These objectives are periodically measured, observed and upgraded from the perspective of a continuous improvement of the Company's environmental performances.

The main targets are as follows:

- to assure legislation abidance as well as its continuous updating;
- to prevent environmental pollution over all Company activities, with special regard for employees, clients and the Environment itself;
- to strengthen employees' environmental awareness, assuring them information, training and encouraging responsibility for their job-related activities;
- to sensitize clients and to give suppliers a sense of responsibility for activities that could have any environmental impact in the Company;
- to be ready in case of any environmental emergencies.

In order to achieve such above mentioned goals, COMAU provides all necessary resources to implement and control the Environmental Management System according to the UNI EN ISO 14001, in terms of human resources, best available means and technologies, expertise and financial resources.
