

COMAU FOR TRAINING AND TEACHING

At Automatica 2016, the first European presentation of the new training cell based on Racer3

Munich, 21 June 2016 – At Automatica in Hall B5, Stand 329, Comau presents its new training cell, the ideal solution for teaching the basic principles of robotics and industrial automation. It is the perfect solution for training at customers' premises and secondary schools, universities and research centers.

The cell's reduced size, with the recessed Racer3 robot, also means that it can easily be transported from one training location to another.

Technologically, the cell integrates a number of features that make it really one of a kind. The Racer3, the smallest articulated robot in the Comau family, is particularly suited for teaching both theory and practice. The structure itself is equipped with a video camera which transmits its image to a monitor mounted outside the work area. This enables the teacher to train even large groups, while ensuring that no one is left behind. The work table, developed by Comau for this application, is drilled to accept a variety of options with a quick release locking system.

The mobile training cell adds a new option to Comau's offering for training and teaching at all levels, and confirms the company's commitment not only to manufacturing innovative solutions, but also to the construction of a genuine culture of automation.

**About Comau:**

Comau is the worldwide leader in manufacturing flexible, automatic systems and integrating products, processes and services that increase efficiency while lowering overall costs. Headquartered in Turin, Italy, with an international network that spans 17 countries that employ more than 12,600 employees, Comau uses the latest technology and processes to deliver advanced turnkey systems that consistently exceed the expectations of its customers. Comau specializes in body joining & assembly, powertrain machining & assembly, robotics and maintenance, as well as advanced production systems and environmental services for a wide range of industrial sectors. The continuous development of its products and services enables Comau to lead the automation industry in meeting the unique requirements of each customer, and through all phases of the project – from design, implementation and installation, to production start-up and maintenance services.
